

V^K KELLY V ANGUS

QUALITY STOCK & SERVICE

ANNUAL BULL & HEIFER SALE

THURSDAY 23 MARCH 2023

80 ANGUS BULLS - 18 MONTH
20 REGISTERED STUD HEIFERS - 12 TO 18 MONTH

KELLY ANGUS

QUINN Q209

Quality Next Gen Performance!

DOB:
26/07/2019

ID:
GXNQ209

AMF, CAF, DDF,
NHF, RGF

- Quinn boasts a tremendous carcass, along with a fantastic topline. He is a very easy doing bull, whose temperament is impeccable. He gets around on a solid set of feet and legs and has a 40cm scrotal.
- His first calves are on the ground, being born approximately 5 days early, with an average birthweight of 32kg.
- Quinn is the only bull in the breed that combines an elite package of calving ease, short gestation, explosive growth, docility and high end carcass merit. He is an exciting prospect!

Biosecurity

Kelly Angus hold current status of J-BAS 8.

Bull Health

All bulls catalogued for sale have been semen tested by Drew Pickford –Nationwide AB. All bulls are tested negative for Pestivirus. All sale bulls are fully vaccinated with Pestigard, 7 in 1 and Vibrovax. They have also had Selovin LA, Vitamin AD&E and Bomection injectable drench.

Insurance

Kelly Angus recommends insuring all purchases from the fall of the hammer. An insurance representative will be in attendance on the day.

Free Delivery

We will endeavour to personally deliver your bulls to your property. For interstate clients we will arrange transport as soon as possible.

Rebate

A 3% rebate will apply to agents that introduce their clients prior to the sale and attend the sale with or on behalf of clients. Accounts must be settled within 10 days.

Catering

Morning Tea and Lunch will be provided.

Sale Time/Inspections

The sale will commence at 1pm on Thursday 23rd March 2023. Inspections from 10am on Sale Day. We welcome inspections by appointment any time prior to the Sale.

Safety

All sale bulls are quiet to handle and we have the utmost of confidence in their temperament. Sale day places added pressure on the bulls and we ask that you use caution while inspecting the bulls. Visitors enter bull pens at their own risk. Children must be supervised at all times.

Quality Assurance

To ensure we provide our clients a product that is of the highest quality we have strict procedures that are followed from birth. All calves are tagged at birth with a management tag and NLIS tag. They are weighed and DNA collected via TSU. From this sample we verify parentage, genomic test, Pesti test and test for genetic defects if there is any probability in the pedigree.

Calves are vaccinated at 4-6 weeks with 7 in 1, a booster shot is given between 8-10 weeks of age. At weaning calves are weighed and receive a triple acting oral drench, Selovin LA, and are vaccinated with Pestigard and IBR MH. Booster shots are given as required.

Mature Cow Weights are also recorded at weaning. All weaner bulls are kept in the one management group until 400 day weights are recorded along with Ultrasound Scanning for EMA, Fats and IMF. Scrotal Size and any abnormalities are also recorded. At that point any culls are removed.

At around 16 months the bulls are independently structurally assessed and docility scored by Jim Green. At this time bulls are also semen tested and vaccinated with Vibrovax.

Conditions of Sale

We trust that the Bull/s you purchase will perform as you expect and provide ongoing value to you. The rigorous structural assessment practices adopted at our farm are intended to ensure that all livestock continue to meet our high standards for genetics, performance and structural integrity. Our commitment to our purchasers is second to none.

In the event that the Bull/s, the subject of the purchase, suffers a structural or fertility breakdown within 2 years of the day of sale Kelly Angus will refund or replace the bull provided the problem is not caused by injury or disease incurred after taking delivery.

The purchaser may:

- Request a full refund of the purchase price (nett of GST) OR
- Negotiate for the purchase of a replacement Kelly Angus Bull of similar genetic make-up.

Conditions:

1. Any claim for a refund or credit must be accompanied by a full veterinary report.
2. Any refund or credit will be equal to the purchase price less the salvage value of the bull.

We strongly recommend you observe your new bull when he is first introduced to the cows and if you have any concerns, please do not hesitate to contact us.

We advise you to insure your bull for at least the first joining period and it is also advisable to pregnancy test 6-8 weeks following joining to ensure satisfactory pregnancy rates have been reached.

Disclaimer

Whilst all due care and attention have been paid in the compilation of this catalogue, neither the vendor nor the selling agents or the representative(s) thereof assume any responsibility whatsoever for the correctness, use or interpretation of the information in this sale catalogue.

We at Kelly Angus welcome you and your family to our Annual On-Farm Bull and Heifer Sale.

We are offering 80 – 18- to 20 month old bulls, along with a first for the stud; 8 - 18 month old and 12 – 12 to 13 month old stud heifers.

This is an exciting opportunity to capture some industry leading genetics with strong pedigree and data that will drive performance.

The 80 Sale Bulls are from leading industry sire lines including GAR Hometown, GAR Inertia, Texas Powerplay, Kelly Angus Quinn, Knowla Nobleman and Hazeldean Jackpot to name a few.

This year's offering are true to type, well balanced with good structure. They have been prepared to go straight to work and not melt under pressure.

We believe this line up of bulls are our best to date and look forward to presenting at auction.

The 20 registered open Heifers consist of some of the first GAR Hometown and Texas Powerplay's females to sell in Australia and are ready to join to a bull of your choice.

It's a fantastic opportunity to get into breed leading genetics that will perform in any operation.

2022 has been an unbelievable year for weather, with significant rainfall and flooding in most of the country. We also experienced a very tough, long winter with all cattle feeling the pinch. It is very pleasing to see how quickly they have bounced back.

Cattle sales have dipped, but quality cattle are sought after and prices are reflecting this, making it a perfect time to consider genetics that will excel in all markets to capture maximum return.

Kelly Angus has had a busy year as we expand and continue to adopt new and modern practices in this fast-moving world.

We continue to utilise genomic enhanced EBV's to achieve predictable and profitable outcomes for all. Our three Stud Sires have been performing very well, with progeny across the country.

Texas Powerplay (DXTP613) is an outstanding semen sire with proven calving ease, low birth weight transforming to an excellent growth spread offering quality carcass traits to match. Powerplay semen is available via World Wide Sires.

Lawson's Rocky (VLYR4010) - what a bull! Moderate in frame with one heck of a carcass! We think all his traits will drive profit in current markets. We have six-month-old calves on the ground that we are super excited about. Semen is available via Breeder Genetics.

Also marketed through Breeder Genetics is Kelly Angus Quinn (GXNQ209). Quinn is a meat machine with moderate frame, unmatched calving ease and birth to growth spread. He is a fantastic commercial option.

We remain focused on breeding livestock that consistently perform well off grass or long fed programs. The positive feedback from our clients verifies our bulls can enter many different climates/operations, and they are resilient with robust longevity.

Temperament is our biggest priority, "It's no secret, quiet cattle do better". Calving ease is also a top priority for us - live calves-out early is another key profit driver. Together these traits work to maximise returns.

We always try to make time available and encourage appointments to inspect the bulls out in the paddock prior to sale day. We value spending time discussing your operation and marketing options for your Kelly Angus blood cattle as we often have clients looking for stock with our genetics.

Nutrien Ag will be conducting the sale which will also be interfaced with Auctions Plus. The sale will start at 1pm with the bulls and heifers being on display in the sale pens from 10am.

We look forward to welcoming you on sale day and helping you find the genetics required for your operation.

Patrick Joyce

UNDERSTANDING THE TRANSTASMAN ANGUS CATTLE EVALUATION (TACE)

What is the TransTasman Angus Cattle Evaluation?

The TransTasman Angus Cattle Evaluation is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. The TransTasman Angus Cattle Evaluation uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcase, fertility).

The TransTasman Angus Cattle Evaluation is an international genetic evaluation and includes pedigree, performance and genomic information from the Angus Australia and Angus New Zealand databases, along with selected information from the American and Canadian Angus Associations.

The TransTasman Angus Cattle Evaluation utilises a range of genetic evaluation software, including the internationally recognised BLUPF90 family of programs, and BREEDPLAN® beef genetic evaluation analytical software, as developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

Using EBVs to Compare the Genetics of Two Animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcase than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals recorded with Angus Australia.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes. For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

Considering Accuracy

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

Description of TACE EBVs

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcase merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following page.

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

Calving Ease/Birth	CEDir	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	CETrs	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	GL	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
	BW	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
Growth	200 Day	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
	400 Day	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
	600 Day	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
	MCW	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
	Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
Fertility	DTC	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
	SS	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
Carcase	CWT	kg	Genetic differences between animals in hot standard carcase weight at 750 days of age.	Higher EBVs indicate heavier carcase weight.
	EMA	cm ²	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate larger eye muscle area.
	Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more fat.
	P8 Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcase.	Higher EBVs indicate more fat.
	RBV	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcase.	Higher EBVs indicate higher yield.
	IMF	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more intramuscular fat.
Feed/Temp.	NFI-F	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
	Doc	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
Structure	Claw Set	score	Genetic differences in claw set structure (shape and evenness of claws).	Lower EBVs indicate a lower score.
	Foot Angle	score	Genetic differences in foot angle (strength of pastern, depth of heel).	Lower EBVs indicate a lower score.
	Leg Angle	score	Genetic differences in rear leg structure when viewed from the side (angle at front of the hock).	Lower EBVs indicate a lower score.
Selection Index	SA	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.	Higher selection indexes indicate greater profitability.
	SA-L	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems. The SA-L index is similar to the SA index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the SA aims to maintain mature cow weight, the SA-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

Selection Indexes	\$D	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade. Steers are either finished using pasture, pasture supplemented by grain, or grain (e.g. 50 -70 days) with steers assumed to be slaughtered at 510kg live weight (280kg carcass weight with 12mm P8 fat depth) at 16 months of age.	Higher selection indexes indicate greater profitability.
	\$D-L	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade. Steers are either finished using pasture, pasture supplemented by grain, or grain (e.g. 50 -70 days) with steers assumed to be slaughtered at 510kg live weight (280kg carcass weight with 12mm P8 fat depth) at 16 months of age. The \$D-L index is similar to the \$D index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$D aims to maintain mature cow weight, the \$D-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.
	\$GN	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 250 day feedlot finishing period for the grain fed high quality, highly marbled markets. Steers are assumed to be slaughtered at 800 kg live weight (455 kg carcass weight with 30 mm P8 fat depth) at 24 months of age, with a significant premium for steers that exhibit superior marbling.	Higher selection indexes indicate greater profitability.
	\$GN-L	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 250 day feedlot finishing period for the grain fed high quality, highly marbled markets. Steers are assumed to be slaughtered at 800 kg live weight (455 kg carcass weight with 30 mm P8 fat depth) at 24 months of age, with a significant premium for steers that exhibit superior marbling. The \$GN-L index is similar to the \$GN index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$GN aims to maintain mature cow weight, the \$GN-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.
	\$GS	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished steers. Steers are assumed to be slaughtered at 650 kg live weight (350 kg carcass weight with 12 mm P8 fat depth) at 22 months of age. Emphasis has been placed on eating quality and tenderness to favour animals that are suited to MSA requirements.	Higher selection indexes indicate greater profitability.
	\$GS-L	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished steers. Steers are assumed to be slaughtered at 650 kg live weight (350 kg carcass weight with 12 mm P8 fat depth) at 22 months of age. Emphasis has been placed on eating quality and tenderness to favour animals that are suited to MSA requirements. The \$GS-L index is similar to the \$GS index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$GS aims to maintain mature cow weight, the \$GS-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.
	\$PRO	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd based in New Zealand that targets the production of grass finished steers for the AngusPure programme. Steers are assumed marketed at approximately 530 kg live weight (290 kg carcass weight with 10 mm P8 fat depth) at 20 months of age, with a significant premium for steers that exhibit superior marbling.	Higher selection indexes indicate greater profitability.
	\$T	\$	Genetic difference between animals in net profitability per cow joined in a situation where Angus bulls are being used as a terminal sire over mature breeding females and all progeny, both male and female, are slaughtered. The Angus Terminal Sire Index focusses on increasing growth, carcass yield and eating quality. Daughters are not retained for breeding and therefore no emphasis is given to female fertility or maternal traits.	Higher selection indexes indicate greater profitability.

TIPS & TOOLS

Understanding Genomics

Genomics is a term used to describe the analysis of the function and structure of a genome, being the complete set of DNA within a single cell or organism.

Within the beef industry, genomics is still an ever expanding technology, with a range of potential applications available within a beef enterprise, plus many more under development.

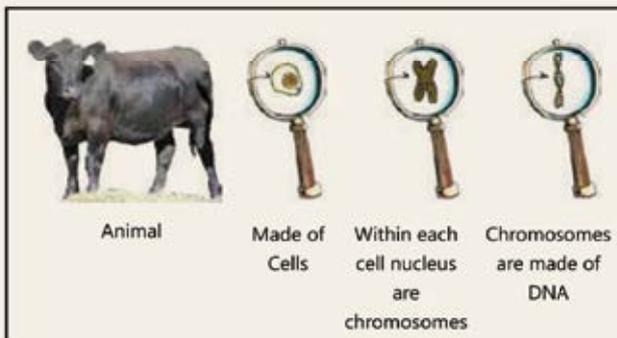

Some of the most common current applications of genomic technology include:

- Parentage Verification
- Management of Genetic Conditions
- Change in Qualitative Traits (e.g. coat colour/polledness)
- Genetic Improvement in Production Traits
- Assessment of Breed Composition

What is DNA?

Deoxyribonucleic acid (DNA) is an exceptionally important molecule found in the nucleus of all bovine cells. It is often described as the 'blueprint' of an organism because it codes the instructions for how that organism will develop, function and appear.

In plants and animals, DNA is bundled into chromosomes. Beef cattle have 30 chromosome pairs, each pair including one chromosome inherited from the sire and one from the dam. Because the progeny inherit chromosomes from both parents, the DNA 'blueprint' is passed on from one generation to the next.

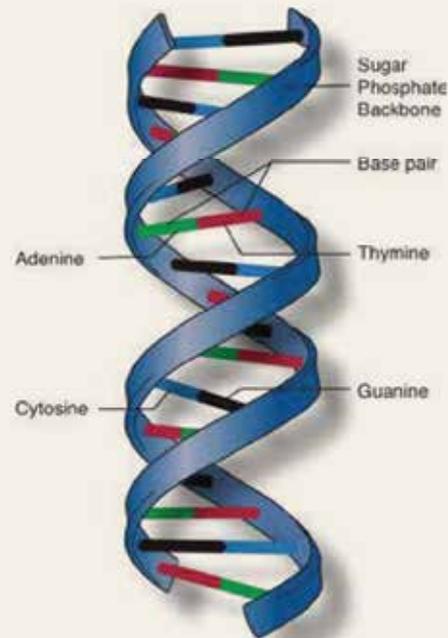

DNA Structure

DNA looks like a long twisted ladder, or double helix. The sides of the ladder are made up of alternating sugar and phosphate molecules. The rungs connect to the sugar molecules and are known as nitrogenous bases. It is the bases which provide the key functionality of DNA and exhibit variation between individuals.

There are approximately 3 billion base pairs in bovine DNA, with four different bases, Adenine (A), Thymine (T),

Guanine (G) and Cytosine (C). Each rung of DNA is made up of two bases linked together, either G to C or T to A. The sequences of these base pairs make up the 'message' of DNA, and differences in sequences provide the basis for variation between individuals.

What is a Gene?

A gene is a base pair sequence at a particular location on the chromosome which codes for a specific product. It is estimated there are between 22,000 and 28,000 genes in the beef animals. Genes are separated on chromosomes by areas of 'non-coding DNA' for which no function has been identified, but still make up part of the animal's genotype.

What is an Allele?

For each gene there may be 2 or more variations, known as alleles, which can result in different phenotypes or observable characteristics. For example one of the genes influencing coat colour has three alleles, the "e" allele for red coat colour, the ED allele for black coat colour and a "Wild type" E+ allele. Which alleles the animal has, and how those alleles interact with each other determines the coat colour of the animal.

What is a Gene Marker (or DNA Marker)?

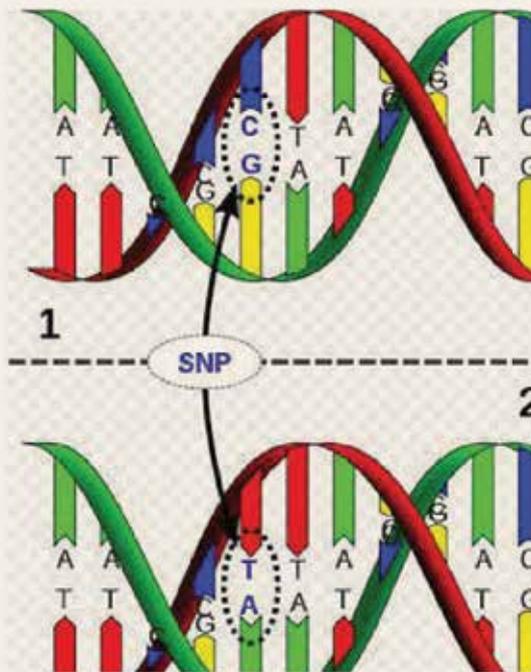

A gene or DNA marker is a known, heritable base pair sequence which is associated with a particular gene. The DNA marker sequence does not necessarily have to be part of the gene that codes for the trait but only associated with it, therefore the value of the genetic marker will vary.

There are several types of DNA markers, but those most commonly being used in the beef industry are SNPs (pronounced "snips"), microsatellites and Indels.

What is a SNP?

Single Nucleotide Polymorphisms (SNPs) are markers where there is a difference in a single base pair. For example, in the figure below, the top animal has a "C & G" base pair at the particular location in the DNA, whereas the bottom animal has a "T & A" base pair.

While early DNA technology only evaluated an animal's DNA for a relatively small number of SNPs, SNP chips now routinely evaluate animals at many thousands of individual SNPs. For example, DNA chips with 7,000 (i.e. 7K), 50,000 (i.e. 50K) or 800,000 (i.e. 800K) SNPs on them are now available.

What is a Microsatellite?

A microsatellite is a repeat of a particular base pair sequence at a specific location in an animal's DNA, for example CACACACA. The number of base pair repeats differs between animals. Microsatellites form the basis for traditional DNA parent verification, which use multiple microsatellites to determine a calves' parentage through the exclusion of possible candidates which do not have the same microsatellites.

■ CACACACACACACACA ■
 ■ GGTGTGTGTGTGTGTGT ■

Key Terms

Trait – Attribute or characteristic of animals that can be measured and improved genetically (for example, growth rate, fertility, carcass or meat quality)

Genotype – the full genetic makeup of an animal including dominant and recessive alleles that may not be expressed

Phenotype – the observable characteristics or traits of an animal that result from the interaction between the animal's genotype and the environment

Locus – the specific location of a gene or DNA sequence on a chromosome

Allele – one form of a gene or a genetic locus

Homozygous – animal carries identical alleles for a gene

Heterozygous – animal carries different alleles for a gene

Dominant – an allele is dominant over another so that the phenotype of the dominant allele is always expressed over the recessive allele

Recessive – an allele is recessive, so that the phenotype is only expressed when two copies of the allele are present (i.e. it is homozygous).

Carrier – animal which is heterozygous and 'carries' a recessive allele which is not being expressed phenotypically

What is an Indel?

An Indel is an insertion or deletion of a particular base pair sequence at a specific location in an animal's DNA. Indels are often associated with recessive genetic conditions.

What is a Genomic Prediction Equation?

As each production trait is influenced by many genes, inferring genetic merit for a particular trait requires the accumulated effects of many markers. Genomic Prediction Equations take the genotype of an animal as collected using dense SNP chips (e.g. 50,000 SNPs), to estimate the animal's breeding value based on the known effect of each SNP on the trait of interest.

Boost Livestock performance

with **Anipro** Liquid Supplements.

Anipro
Liquid Supplements

Deliver protein and minerals to optimise production.

Improving results in beef cattle systems requires year-round nutrition planning. Anipro provides convenient, custom nutrition liquid supplements that optimises available forage, minerals, and protein for herd health and profitability.

- ✓ MOLASSES BASED LIQUID SUPPLEMENT
- ✓ ESSENTIAL PROTEIN, MINERALS AND VITAMINS
- ✓ UP TO 27% IMPROVEMENT IN FORAGE INTAKE
- ✓ FULLY SERVICED PROGRAM SAVES TIME & MONEY

Ration formulation and nutrition advice

Custom feeding: domestic, export and stud cattle

What Our Clients Are Saying

"Many of my key clients use products and services from McKenzie Ag Services. The results have been excellent and the service cannot be faulted."

Mick Curtis - Rodwells

"McKenzie Ag Services supply all our supplementary feed requirements for our Stud Stock as well as our commercial operation. The nutritional advice we receive is extremely helpful and we couldn't be happier with the feed quality. When it comes to feeding livestock, the products and services from McKenzie Ag come with our highest recommendation."

Pat Joyce - Kelly Angus

"In addition to supplying my feed and formulating my rations, I rely on McKenzie Ag Services for advice on many aspects of my feedlot business. Their combined knowledge of the grains industry and intensive livestock production is hard to come by, and has been instrumental to the success of my feedlot operations."

Simon O'Donnell - Beef Producer

"McKenzie Ag are a critical component of our operations at Yambinya Station. Their assistance with ration formulation, feed budgeting, grain and fodder inventory control and supply contracts are critical to our business. We rely on McKenzie Ag to provide the most appropriate rations for our Beef and Lamb Feedlots at Yambinya Station, as well as assisting many of our Farm Assurance and Great Southern producers. McKenzie Ag comes with my highest recommendation."

Steve Chapman - Southern Livestock Manager, JBS

Lachlan McKenzie | P: 0417 899 221 | E: lach@mckenzieag.com.au

LAWSONS ROCKY R4010

Rocky is unmatched within the Angus breed!

Rocky is the record breaking, highest priced yearling bull across all breeds within Australia, selling for \$130,000 to Kelly Angus, Gilmandyke Angus, Dunoon Angus and Knowla Livestock.

Rocky commands your attention with his sire appeal and overall balance in an attractive, well-made package. A bull that stands square to the ground with added muscling, natural thickness, and base width.

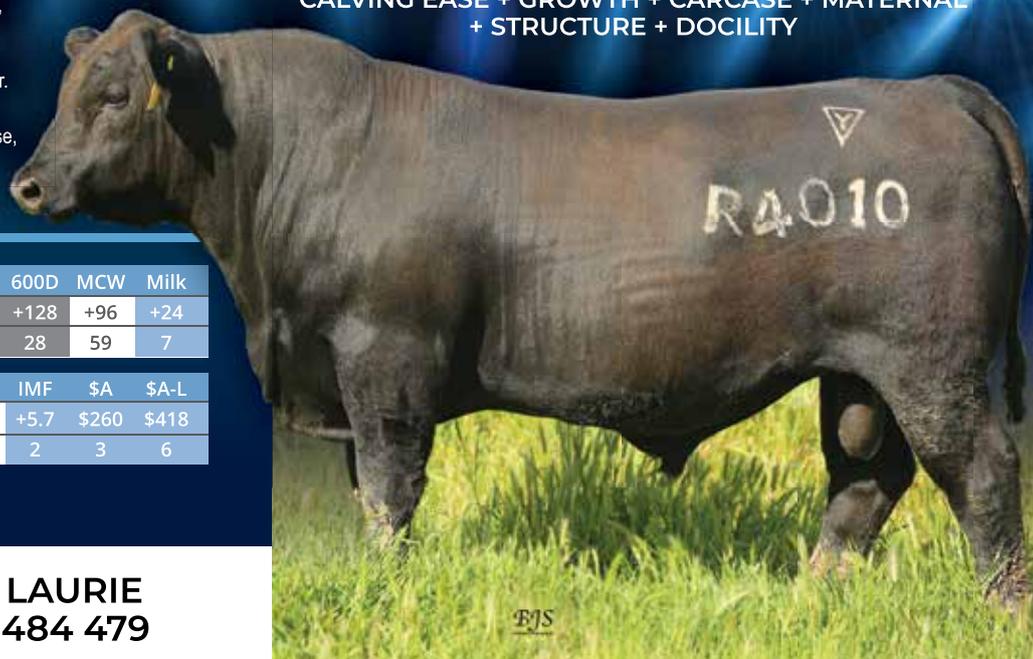

Rocky was 34kg born out of a maiden heifer P4005, who is a functional female, with a picture perfect udder.

The data speaks for itself, he is the only animal in the breed to have his level and combination of calving ease, growth, fertility, and carcass data.
